PROFILE

Software Engineer with 4+ years' experience building backend systems for fintech platforms across Sri Lanka and Cambodia. First Class Honours graduate in Computer Science (University of Westminster). Specializes in Java, Spring Boot, and REST API design, with hands-on experience delivering payment infrastructure, digital lending microservices, and most recently cloud/DevOps deployments on GCP using Kubernetes and Istio. Comfortable operating across the stack, from production incident response to system architecture, and adept at using AI-assisted tooling to accelerate development and troubleshooting

TECHNICAL SKILLS

- ·Languages: Java, JavaScript/TypeScript, Python (Intermediate), R (Intermediate), HTML/CSS
- ·Backend & Frameworks: Spring Boot, Spring Data JPA, JSP, WSO2 Services, FastAPI, RESTful API Design, Microservices
- ·Cloud & DevOps: Google Cloud Platform (GCP), Kubernetes (GKE), Istio Service Mesh, Docker, CI/CD
- ·Databases: MySQL, PostgreSQL, Oracle DB
- ·Security & Quality: OAuth2/JWT, Identity Provider (IdP) Troubleshooting, SonarQube, Application Hardening, JUnit
- ·Tools & Practice: Git/GitHub, Postman, Swagger, Agile/Scrum, AI-Assisted Development

PROFESSIONAL EXPERIENCE

Software Engineer

April 2026 – Present

iPay Cambodia (Primary) | iPay Sri Lanka (Supporting)

- **Cloud & DevOps**
  - Led the DevOps deployment of a new product on Google Cloud Platform (GCP), provisioning Kubernetes clusters and workspaces from the ground up.
  - Implemented an Istio service mesh to manage secure, observable inter-pod communication across microservices.
  - Used AI-assisted development tooling to accelerate infrastructure setup, cluster configuration, and deployment workflows.
  - Diagnosed and resolved a critical Identity Provider (IdP) authentication outage, using AI-assisted debugging tools to accelerate root-cause analysis and restore service.
- **Fintech & Payment Infrastructure**
  - Designed and developed a cross-border remittance architecture for LOLC Cambodia, implementing dual-currency (KHR/USD) QR generation and payment processing.
  - Developed deep-link payment integrations enabling merchants to trigger in-app payment flows directly from external channels, streamlining the customer checkout experience.
- **Core Banking, Loans & Governance**
  - Enforced code quality benchmarks using SonarQube, identifying and resolving structural vulnerabilities and code smells.
  - Provided production support and incident troubleshooting, maintaining system uptime and performance.

Associate Software Engineer

Sep 2023 – April 2026

iPay Cambodia (Primary) | iPay Sri Lanka (Supporting)

- **Fintech & Payment Infrastructure**
  - Integrated the National Bank of Cambodia (NBC) SDK to generate standards-compliant KHQR codes, streamlining inter-bank mobile transactions.
  - Architected a real-time, rule-based Fraud Risk Management (FRM) system for mobile banking, mitigating transaction risk through immediate pattern analysis.

- Led a system migration for iPay Sri Lanka, transitioning core API integrations from legacy SOAP to high-performance REST services via the mCash switch.
- Designed, documented (via Swagger), and optimised scalable backend REST APIs supporting core fintech operations.

- **Core Banking, Loans & Governance**
  - Engineered and launched digital lending microservices, including Salary Advance Loans and Gold Financing, for LOLC Cambodia.
  - Overhauled the core payroll module to reliably process 10,000+ monthly transactions using transactional retries and recovery fallbacks.
  - Led backend development for the customer digital onboarding journey on the LOLC Mobile Cambodia application.
  - Integrated secure, high-availability third-party services, including SMS gateways, payment gateways, and Card Management Services (CMS).

Intern Software Engineer
Aug 2022 – Aug 2023

iPay Cambodia (Primary) | iPay Sri Lanka (Supporting)

- Contributed to QA by designing, tracking, and executing integration and system test plans.
- Wrote unit and integration test suites using JUnit, improving code reliability and test coverage.
- Identified and fixed backend anomalies, and resolved SQL query performance bottlenecks.
- Assisted in Java-based feature development and supported live production releases.

Freelance Software Developer
2022 – Present

Self-Employed

- Built custom web and backend applications using Spring Boot, Thymeleaf, and MySQL for small businesses.
- Designed REST API integrations connecting e-commerce platforms with billing and notification systems.
- Delivered responsive UIs and branding-focused digital designs, managing client relationships independently.

PROJECTS

Call Management System – (Spring Boot + PostgreSQL + HTML, hosted on Heroku)

- Developed a web solution to visualize stats and details of an AI call agent.
- Implemented backend services using Spring Boot and PostgreSQL, with a responsive frontend.
- Hosted the application on Heroku for easy access and demonstration.

Project Tools – (Vibe Coding, hosted on Vercel)

- Built using AI-assisted rapid prototyping, deployed on Vercel, and used for daily productivity tasks.

AdSync – (Spring Boot backend + React TypeScript frontend + Python ML, hosted on Vercel)

- Developed for a university module.
- Implemented age detection of humans using images with a custom ML algorithm written in Python.
- Backend deployed with Spring Boot, frontend with React TS, and ML API hosted on Vercel using FastAPI.
- Model on Kaggle

Airport Passenger Prediction – (Time Series Analysis, Kaggle)

- University project analyzing monthly air passenger traffic in Sri Lanka.
- Created and published dataset on Kaggle, tested multiple time series forecasting algorithms to determine the best-performing model.
- Model on Kaggle | Dataset

EDUCATION

BSc (Hons) Computer Science - First Class Honours
University of Westminster

RESEARCH

M3-FX: A Multi-Modal, Multi-Model Forex Forecasting Framework for the LKR/USD Currency Pair
Final Year Research Project - Accepted, Central Bank of Sri Lanka International Research Conference

- Designed a unified LSTM-based forecasting framework integrating four previously siloed signal types: news sentiment (via FinBERT), central bank communication tone (fine-tuned hawkish/dovish classifier), technical indicators, and macroeconomic fundamentals.
- Achieved a Mean Absolute Error of 0.672 LKR and RMSE of 0.8415, with a Theil's U statistic of 0.578 confirming the model outperforms a naïve random walk benchmark.
- Delivered 52.76% directional accuracy and calibrated prediction intervals to 84.7% coverage, supporting practical risk-management applications.

ACHIEVEMENTS

- Gold Medalist, Indoor Archery Youth Cup 2013 (Singapore) B - Division; multiple national archery championship titles.
- Runner-Up, Sri Lanka Robotics Challenge 2017 (University of Moratuwa, School Category).
